August 2021

Slovenian Agriculture in Numbers presents the main indicators of state and development of Slovenian agriculture.

It is based on the official data sources listed under the individual tables and graphs, and were available up to May 31st 2021. Main data sources are:

- **Statistical Office of the Republic of Slovenia** (SORS), data from the data portal SI-STAT (theme Agriculture, forestry and fishery ; field Agriculture and fisheries; <https://pxweb.stat.si/SiStat/en/Podrocja/Index/85/agriculture-forestry-and-fishery>),
- **Ministry for Agriculture, Forestry and Food** (MAFF),
- **Agency for Agricultural Markets and Rural Development** (AKTRP),
- **Slovenian Environment Agency** (SEA),
- **Administration of the Republic of Slovenia for Food Safety, Veterinary Sector and Plant Protection** (AFSVPP),
- **Eurostat** (<http://ec.europa.eu/eurostat/data/database>).

More data is available in the Reports on the State of Slovenian Agriculture, Food, Forestry and Fisheries (https://www.kis.si/Porocila_o_stanju_v_kmetijstvu_OEK/), prepared by the Agricultural Institute of Slovenia (AIS). The data in the brochure are rounded, therefore derivations from the SORS data or other data may occur.

Summary

In 2020, agriculture, together with forestry and fisheries contributed 2.3% to total value added and 6.9% to total employment. Similarly, as in the recent few years, the share of employment in agriculture continues to decrease.

According to the latest temporary data from **Farm Structure Survey (2020)**, the downward trend in the number of agricultural holdings continues, while the utilized agricultural area (UAA) also decreased slightly. The average agricultural holding cultivates 7.1 ha of UAA, a quarter more than in 2000. The improvement in the size structure continues as the number of agricultural holdings that cultivated more than 20 ha of UAA has more than doubled compared to 2000. These agricultural holdings now cultivate more than one-third of the total UAA, an increase of 17 percentage points from 2000. Livestock holdings raise an average of 9.1 livestock units (LSU) in 2020, which is 3 LSU more than in 2000. The size structure of livestock holdings has also improved compared to 2000. The number of livestock holdings with more than 20 LSU has increased by 27% between 2000 and 2020, and these livestock holdings raise 56% of all LSU (22 percentage points more than in 2000).

In recent years, a reduction of negative **impacts of agriculture on the environment** can be noticed. The use of pesticides and mineral fertilizers has become more rational. In general, there is also a notable increase in the share of legumes in crop rotation and an increase in the area of minor agricultural plant species. The agricultural area under organic farming is also increasing; in 2020 to approx. 52 thousand ha (10.8% of all UAA), with permanent grassland predominating in the structure (80%).

In terms of agricultural production, the year 2020 was favorable compared to the previous year. The **agricultural production volume** increased by 9%, with crop volume increased by almost 15% and livestock production by 1%.

For most arable crops and grassland forage, the 2020 harvest was above average, and yields of most fruit species were also better. Most agricultural crop groups recorded significantly higher total yields than in 2019, while total yields of rapeseed, sugar beet, dry legumes, oats, rye and peaches were lower than last year. Fruit production increased by 27% and grape production remained on average close to the level of the previous year. Compared to 2019, agricultural land use on agricultural holdings increased only slightly (+0.8%), especially the area of permanent crops (+2.3%), while the area of meadows and pastures and fields remained almost at the same level as the previous year.

In 2020, an increase in livestock production was recorded only in broilers production and sheep and goat meat production. A decrease was recorded in cattle meat and pig meat production, the latter due to a further decrease in the number of animals. More cow's milk was produced in 2020 than in the previous year, while goat's milk and egg production were lower. In honey production, conditions for the honey harvest were more favorable in 2020 than in 2019, but despite a doubling of yield compared to 2019, the honey harvest was still below the long-term average.

Domestic consumption increased markedly in year 2020 in rice, and among animal products in honey. The highest consumption ever was recorded in vegetables and poultry meat. The consumption of meat on the aggregated level decreased, which is a result of lower consumption of pig meat and cattle meat. Notable decreases in consumption were recorded in rye, maize, and eggs, while consumption in wheat decreased only slightly. Milk consumption declined slightly in 2020 again and was slightly below the last five-year average.

Self-sufficiency rates, which have fluctuated due to the changes in production volumes and consumption in the recent period, were higher in 2020 than in the previous year in cereals, potatoes, vegetables, fruit, meat, milk and honey, while they remained at the same level as the previous year for eggs. Similar to previous years, domestic production of milk (self-sufficiency rate 134%), cattle meat (107%), and poultry meat (111%) was higher than domestic consumption, and for the first time, maize self-sufficiency exceeded 100 percent (116%) due to a record harvest.

In 2020, **producer prices of agricultural products** decreased slightly at the aggregate level. Compared to 2019, they decreased by 2.0% (-2.0% in real terms; average deflation was -0,1 %). Price levels for animal products decreased, while price levels for crop products increased slightly.

Prices of crop products at the aggregate level increased by 1.1% in 2020 compared to the previous year and prices were higher than the last ten-year average. On average, the highest increase in prices was recorded for fruits, oilseeds and industrial crops. Compared to the previous year, the price decrease was recorded for grapes, potatoes, vegetables and cereals. In livestock production, average producer prices at aggregate level decreased by 4.0%. The largest decreases were recorded in the prices of cattle, poultry and cow's milk, while the prices of pigs fell slightly. Only the prices for lamb and for eggs recorded a slight increase.

In 2020, besides the decrease in agricultural producer prices, **prices for agricultural inputs** also decreased (-1.4%). The most significant decreases were in the prices of energy and mineral fertilizers. The decrease in prices of other inputs was not so intense. As the decrease in the prices of agricultural products was higher than the decrease in the prices of agricultural inputs, the terms of trade were less favorable compare with the previous year, but remained at the level of the average of recent years.

The **economic results of agriculture** at the aggregate level improved in the pandemic year 2020 compared to a relatively normal previous year. In real terms, net value added increased by around 11% and factor income increased by around 5% compared to the previous year. With the same value of total output (around 1.4 billion EUR) and at the same time lower intermediate consumption, the factor income was around 571 million EUR or almost 7,500 EUR per annual working unit. The increase in income was mainly due to the larger physical volume of crop production, a slight increase in livestock production, and lower intermediate consumption, despite lower prices of all main products and product groups.

In 2020, the implementation of **direct payments** scheme continued: the basic payment, green payment, additional payment for Young Farmers scheme, payment for the areas with natural constraints and optional payment in the framework of Small Farmers scheme. Additionally, the agricultural holdings could apply also for production coupled payments for small grain cereals, vegetables, cattle and milk production in mountain areas. The national envelope for direct payments remain the same as in 2019 and amounted to 134.3 million EUR.

The implementation of the measures defined in the **RDPI for the period 2014–2020** also continued. By the end of 2020 approximately 977 million EUR had been granted for measures and technical assistance (88% of the program's available resources; 1,107 million EUR) of which 775 million (70%) had been already paid out. Most of the payments (66%) were paid for the measures implemented under the subsidy campaign and were related to the annual payments for agri-environment-climate measures, animal welfare and payments to farmers with areas with natural and other constraints. Among the measures implemented on the basis of public tenders, 17 public tenders were published in 2020.

The Covid-19 epidemic has also affected agriculture and the sectors most affected have received financial assistance. The following sectors were able to receive financial compensation: wine production, beef production, pig production, sheep and goat breeding, and supplementary activities on the farm. These financial aids totaled EUR15.5 million.

Total **budget support to agriculture** in 2020 amounted to 391.1 million EUR, which is slightly more than the previous year. The share of co-financing from the EU budget was 68%.

According to the structure of budget support, most funds were allocated to market and direct support measures (46%; EUR178.4 million), followed by funding structural and rural development measures (43%; EUR168.9 million). The share earmarked for the financing of general agricultural services remained relatively low (11%; EUR43.9 million).

Under market and direct support measures, payments increased by 10% compared to 2019, as measures were implemented to help mitigate the impact of income losses in agriculture due to the covid-19 epidemic. Compensation was paid to wine producers and cattle, pig, sheep and goat farmers. Larger funds were allocated to agricultural holdings to help mitigate the consequences of natural disasters (hailstorms in 2019). Under rural development and structural policy measures, payments decreased slightly (–2%) compared to 2019. Within this group, more than half of the funding (55%) is aimed for environmental measures. The funds for general agricultural services increased slightly (by 3%) compared to 2019, mainly in the group of measures for research, development, extension, and professional services.

The total **trade in agri-food goods** remained at the same level as the previous year, with the export increasing by 3.1% and import decreasing by 1.1%. Further, the coverage of imports by exports increased to 61.6% (in 2019: 59.1%), which resulted in slightly decreased trade deficit.

Slovenia remains net value importer for most agri-food products. Trade surpluses (in value) occurred in groups miscellaneous edible preparations, meat preparations, live animals, oilseeds and oleaginous fruits, lac, gums and vegetable extracts and dairy products (eggs and honey are also included in the group). The positive trade balance in groups of live animals and lac, gums and vegetable extracts improved compared to 2019, while trade surplus decreased in other groups. A larger deficit as in the year before was recorded in fruits, while the deficit in meat, vegetables, cereals, sugar and animal feeds decreased. Most of the agri-food trade was created with the EU member states, where exports to EU member states accounted for 76% of total exports and imports from EU member states accounted for 83% of total imports. As in previous years, the countries of the former Yugoslavia represent important trade partners (13% of total exports, 3% of total imports).

Key general statistics for Slovenian agriculture

	Ø 2008-12	Ø 2013-17	2018	2019	2020
Agriculture in economy
